

Demographic Measures

Age

- In years.

Gender

- Male, female, non-binary, other.

Science-related Measures

Psychological Distance to Science (PSYDISC)

Većkalov, B., Zarzeczna, N., McPhetres, J., van Harreveld, F., & Rutjens, B. T. (2024).

Psychological Distance to Science as a Predictor of Science Skepticism Across Domains. *Personality & Social Psychology Bulletin*, 50(1), 18–37.

<https://doi.org/10.1177/01461672221118184>

- The scale can be found in the appendix.

Credibility of Science Scale (CoSS)

Hartman, R. O., Dieckmann, N. F., Sprenger, A. M., Stastny, B. J., & DeMarree, K. G.

(2017). Modeling attitudes toward science: Development and validation of the Credibility of Science Scale. *Basic and Applied Social Psychology*, 39(6), 358–371.

<https://doi.org/10.1080/01973533.2017.1372284>

- The scale can be found in the appendix.

Faith in Science Scale

Rutjens, B. T., Sengupta, N., van der Lee, R., van Koningsbruggen, G. M., Martens, J. P.,

Rabelo, A., & Sutton, R. M. (2022). Science skepticism across 24 countries. *Social Psychological and Personality Science*, 13(1), 102–117.

<https://doi.org/10.1177/19485506211001329>

- The 5-item version can be found [here](#), but this version has been adapted from a scale that has 10-items and was created by Farias et al. (2013). The 5-item version combines items from Farias et al. (2013) and Hayes & Tariq (2000). You should cite all three(!) when using it (Farias et al., 2013; Hayes & Tariq, 2000; Rutjens et al., 2022).
 - Farias, M., Newheiser, A. K., Kahane, G., & de Toledo, Z. (2013). Scientific faith: Belief in science increases in the face of stress and existential anxiety. *Journal of Experimental Social Psychology*, 49(6), 1210–1213.
<https://doi.org/10.1016/j.jesp.2013.05.008>
 - Hayes, B. C., & Tariq, V. N. (2000). Gender differences in scientific knowledge and attitudes toward science: A comparative study of four Anglo-American nations. *Public Understanding of Science*, 9(4), 433–447.
<https://doi.org/10.1088/0963-6625/9/4/306>

Government Science Funding

Rutjens, B. T., Sutton, R. M., & van der Lee, R. (2018). Not all skepticism is equal:

Exploring the ideological antecedents of science acceptance and rejection. *Personality and Social Psychology Bulletin*, 44(3), 384–405.

<https://doi.org/10.1177/0146167217741314>

Rutjens, B. T., Sengupta, N., van der Lee, R., van Koningsbruggen, G. M., Martens, J. P.,

Rabelo, A., & Sutton, R. M. (2022). Science skepticism across 24 countries. *Social*

Psychological and Personality Science, 13(1), 102–117.

<https://doi.org/10.1177/19485506211001329>

Većkalov, B., Zarieczna, N., McPhetres, J., Van Harreveld, F., & Rutjens, B. T. (2024). Psychological Distance to Science as a Predictor of Science Skepticism Across Domains. *Personality and Social Psychology Bulletin*, 50(1), 18–37.

<https://doi.org/10.1177/01461672221118184>

- These papers include one item that measures public opinions on governmental science funding. They are very similar items. We will use the one from Većkalov et al. (2024). All have to be cited when used.

Scientific Reasoning Scale (SRS)

Drummond, C., & Fischhoff, B. (2017). Development and Validation of the Scientific Reasoning Scale. *Journal of Behavioral Decision Making*, 30(1), 26–38.

<https://doi.org/10.1002/bdm.1906>

- The scale can be found in the appendix.

Personality Measures

Actively open-minded thinking (AOT)

Stanovich, K. E., & Toplak, M. E. (2023). Actively Open-Minded Thinking and Its Measurement. *Journal of Intelligence*, 11(2), 27.

<https://doi.org/10.3390/jintelligence11020027>

- The scale can be found in Table 1.

Ten-Item Personality Inventory (TIPI)

Gosling, S. D., Rentfrow, P. J., & Swann, W. B., Jr. (2003). A very brief measure of the Big-Five personality domains. *Journal of Research in Personality*, 37(6), 504–528.

[https://doi.org/10.1016/S0092-6566\(03\)00046-1](https://doi.org/10.1016/S0092-6566(03)00046-1)

- The scale can be found in the appendix.
- This measure is less validated than some other personality measures, requires additional reporting on its psychometric properties.

Belief and Political Measures

Human Values Scale

Schwartz, S. H. (2003). A proposal for measuring value orientations across nations *In Questionnaire Development Package of the European Social Survey*, 259-319, 2003

- The scale can be found [here](#).
- Instead of using “him/her” we will use gender-neutral language, and therefore will only have one version of the survey.

Political Identity

Rutjens, B. T., Sengupta, N., van der Lee, R., van Koningsbruggen, G. M., Martens, J. P., Rabelo, A., & Sutton, R. M. (2022). Science skepticism across 24 countries. *Social Psychological and Personality Science*, 13(1), 102–117.

<https://doi.org/10.1177/19485506211001329>

- They used a one-item scale to ask participants how they identify politically (1-10 with 1 being very left wing and 10 being very right wing). We will adapt this similarly to Većkalov et al. (2024) to measure the extent of their identification with 2 items, one for economic, one for social issues, with a range 1 (left-wing/progressive) to 10 (right-wing/conservative).

- Većkalov, B., Zarzeczna, N., McPhetres, J., Van Harreveld, F., & Rutjens, B. T. (2024). Psychological Distance to Science as a Predictor of Science Skepticism Across Domains. *Personality and Social Psychology Bulletin*, 50(1), 18–37. <https://doi.org/10.1177/01461672221118184>

Optional Measures

Sexist attitudes

Glick, P., & Whitehead, J. (2010). Hostility toward men and the perceived stability of male dominance. *Social Psychology*, 41(3), 177–185. <https://doi.org/10.1027/1864-9335/a000025>

- Measures are reported in appendix A, B, C.

Self-reported technology usage

- One-item measures, or already existing questionnaires (need to be suggested).
- E.g., social media, time-usage, AI use, platform use, etc.

Self-reported SES

- More subjective measures like the MacArthur Scale of Subjective Social Status, or
- More “objective” (but still self-reported) measures like obtained education, income, etc.
